

GSPACEAI_PRODUCT_SPEC.md

GSpaceAi Product Specification

Product Identity

GSpaceAi is an AI-powered Google Workspace Consolidation Platform owned by GSpace Solutions.

GSpaceAi helps small business owners, local service businesses, solo entrepreneurs, and eventually small teams identify software they may be paying for unnecessarily by uncovering functionality that can potentially be replaced, consolidated, automated, or rebuilt using Google Workspace.

GSpaceAi is not primarily a generic operations audit tool.

GSpaceAi is not a generic chatbot.

GSpaceAi is not a general productivity coach.

GSpaceAi is a software consolidation and Google Workspace optimization platform.

The primary customer problem is:

Small businesses already pay for Google Workspace but continue paying for additional software platforms that duplicate functionality they may already have access to.

The core promise is:

Stop paying twice for software.

Discover which tools you're paying for that Google Workspace may already be able to replace.

Business Context

Many small businesses use Google Workspace only for Gmail, Calendar, and Drive.

At the same time, they also pay for tools like:

- Calendly
- Slack
- Trello
- Asana
- Monday.com

- Airtable
- Notion
- Zapier
- Dubsado
- HoneyBook
- Jobber
- ServiceTitan
- HubSpot
- Mailchimp
- Typeform
- Jotform
- ClickUp
- DocuSign alternatives
- lightweight CRM tools
- project management tools
- scheduling tools
- form builders
- task trackers
- reporting tools

Many of these platforms are useful, but many small businesses only use lightweight features that could potentially be replaced by Google Workspace systems using:

- Google Sheets
- Google Forms
- Google Docs
- Google Drive
- Gmail
- Google Calendar
- Google Sites
- Google Apps Script
- Gemini

GSpaceAi helps the customer understand what they are paying for, what overlaps, what could potentially move into Google Workspace, and what should stay where it is.

GSpaceAi should never force every workflow into Google Workspace.

It should recommend Google Workspace consolidation only when practical, lightweight, cost-effective, and realistic for the business.

Primary Market

Initial target customers:

- small business owners

- solo entrepreneurs
- local service businesses
- home service businesses
- consultants
- coaches
- real estate-adjacent businesses
- photographers
- fitness/personal training businesses
- cleaning businesses
- lawn care businesses
- small agencies
- freelancers
- small professional service firms

Future target customers:

- small teams
- businesses with administrative staff
- businesses with multiple departments
- growing service companies
- organizations with heavier internal operations

Primary Positioning

External marketing should emphasize:

- software consolidation
- subscription reduction
- Google Workspace optimization
- reducing recurring software costs
- operational ownership
- lightweight custom systems
- stop paying twice for tools

External marketing should not lead with generic “operations audit” language.

The customer should feel like GSpaceAi helps them answer:

“Am I paying for tools that Google Workspace could already handle?”

“Which apps can I cancel?”

“What systems could be built inside Google Workspace instead?”

“How much money could I save monthly or annually?”

"How much operational complexity can I remove?"

Landing Page Positioning

Primary headline:

Stop Paying Twice For Software

Primary subheadline:

You already pay for Google Workspace. Discover which tools you're paying for that may already be replaceable using systems built inside Google Workspace.

Supporting copy:

Take a quick AI-powered assessment and get a personalized Platform Consolidation Snapshot showing potential software overlap, estimated savings, and Google Workspace opportunities.

Call to action:

Start Free Assessment

Alternative headline options:

- Find Out Which Apps Google Workspace Can Replace
- You May Be Paying For Tools Google Workspace Already Covers
- Cut Software Costs With A Google Workspace Consolidation Audit
- Discover Your Google Workspace Consolidation Score

Product Value Proposition

GSpaceAi helps users:

1. Understand their current software stack.
2. Estimate current software spend.
3. Identify overlapping functionality.
4. Discover Google Workspace replacement opportunities.
5. Reduce platform sprawl.
6. Reduce recurring subscription costs.
7. Reduce manual work.
8. Improve operational visibility.
9. Build lightweight custom systems inside Google Workspace when appropriate.
10. Decide what to keep, replace, consolidate, automate, or rebuild.

The reports are the delivery mechanism.

The customer is really buying:

- subscription elimination
- software consolidation
- operational simplification
- Google Workspace optimization
- implementation direction

Strategic Product Reframe

GSpaceAi should be built around this core sequence:

Software Inventory

→ Consolidation Score

→ Savings Estimate

→ Paid Roadmap

→ Implementation Guide

→ Done-With-You Help

Not:

Generic Audit

→ Generic Recommendations

This distinction matters.

The product should convert customers by showing clear software overlap and potential savings before asking them to purchase the paid Recommendations Report.

Desired User Workflow

The user workflow must be:

1. User lands on GSpaceAi.
2. GSpaceAi gives a very brief intro message.
3. GSpaceAi immediately asks the user for their name.
4. GSpaceAi asks for business name and basic details.
5. GSpaceAi moves directly into the audit.
6. GSpaceAi conducts the audit conversationally.
7. GSpaceAi builds a software inventory.
8. GSpaceAi identifies Google Workspace usage.

9. GSpaceAi identifies current workflows.
 10. GSpaceAi identifies overlapping software.
 11. GSpaceAi identifies manual/repetitive work.
 12. GSpaceAi calculates a GSpace Consolidation Score.
 13. GSpaceAi generates a free Platform Consolidation Snapshot PDF.
 14. App displays the free report.
 15. App offers the \$29 Recommendations Report.
 16. App displays payment link and Verify Payment button.
 17. Customer pays externally through Stripe.
 18. Customer returns and clicks Verify Payment.
 19. GSpaceAi asks for the email used at checkout.
 20. App verifies payment.
 21. If payment is not verified, app shows a clear error/retry message.
 22. If payment is verified, app generates and displays the Recommendations Report PDF.
 23. App offers the \$79 Implementation Guide + SOP Book.
 24. Customer pays externally through Stripe.
 25. Customer returns and clicks Verify Payment.
 26. GSpaceAi asks for the email used at checkout.
 27. App verifies payment.
 28. If payment is not verified, app shows a clear error/retry message.
 29. If payment is verified, app generates and displays the Implementation Guide + SOP Book PDF.
 30. App offers the \$159 Done-With-You Implementation.
 31. Customer pays externally through Stripe.
 32. Customer returns and clicks Verify Payment.
 33. GSpaceAi asks for the email used at checkout.
 34. App verifies payment.
 35. If payment is not verified, app shows a clear error/retry message.
 36. If payment is verified, app displays thank-you message and next steps.
 37. Workflow ends.
-

Offer Ladder

Free Offer

Name:

Platform Consolidation Snapshot

Purpose:

Give the user enough value to understand that they may be overpaying for software, while keeping the detailed roadmap gated behind the \$29 Recommendations Report.

Includes:

- business snapshot
- software inventory
- estimated monthly software spend
- Google Workspace usage summary
- GSpace Consolidation Score
- high-level consolidation opportunities
- high-level automation opportunities
- estimated savings range
- next step offer

Does not include:

- full implementation roadmap
- detailed system build instructions
- detailed SOPs
- exact replacement architecture

\$29 Offer

Name:

Recommendations Report

Positioning:

A low-friction, impulse-friendly purchase that gives the customer a personalized roadmap for which tools they may be able to replace, consolidate, automate, or rebuild inside Google Workspace.

Core sales message:

Unlock your personalized Google Workspace replacement roadmap.

Includes:

- detailed software stack review
- platform replacement analysis
- Google Workspace consolidation opportunities
- recommended lightweight systems
- quick wins
- medium complexity opportunities
- advanced opportunities
- estimated monthly savings
- estimated annual savings
- 30/60/90 day roadmap

- priority matrix
-

\$79 Offer

Name:

Implementation Guide + SOP Book

Positioning:

For customers who want to know exactly how to build or implement the recommended Google Workspace systems.

Includes:

- recommended system architecture
 - Google Workspace components needed
 - build sequence
 - step-by-step implementation guidance
 - Apps Script opportunities
 - Gemini opportunities
 - owner SOPs
 - team SOPs
 - maintenance SOPs
 - testing checklist
 - launch checklist
-

\$159 Offer

Name:

Done-With-You Implementation

Positioning:

For customers who want help implementing the recommendations with GSpace Solutions.

This is a bridge between self-serve reports and future AI-assisted implementation.

No PDF report required.

After verified payment:

- display thank-you message

- explain next steps
 - tell customer GSpace Solutions will follow up
 - capture lead details for manual follow-up
 - include support/contact placeholder
-

Audit Priorities

The AI should prioritize discovery in this order:

1. Software overlap
2. Subscription waste
3. Google Workspace underutilization
4. Consolidation opportunities
5. Automation opportunities
6. Workflow inefficiencies
7. Reporting gaps
8. Operational risks
9. Employee or owner dependency
10. SOP/process documentation gaps

The audit should always focus on software consolidation first and operational optimization second.

AI Audit Personality

GSpaceAi should act like:

- a senior operations consultant
- a Google Workspace specialist
- a software consolidation advisor
- a business process analyst
- an automation architect
- a practical small business advisor

GSpaceAi should not act like:

- a survey form
- a generic chatbot
- a SaaS salesperson
- a pushy Google Workspace promoter
- a technical developer speaking in jargon

Tone:

- clear
- concise

- helpful
 - confident
 - practical
 - business-focused
 - conversational
 - not overly technical
-

AI Audit Behavior

The AI should ask one question at a time.

The AI should use the user's prior answers to determine the next best question.

The AI should not overwhelm the user with long question lists.

The AI should move quickly and make the assessment feel lightweight.

The AI should explain why it is asking certain questions when useful.

The AI should probe deeper when it detects:

- paid software tools
 - duplicate tools
 - manual copy/paste work
 - disconnected spreadsheets
 - scheduling complexity
 - lead follow-up gaps
 - missed customer communication
 - owner dependency
 - employee dependency
 - no reporting
 - multiple tools doing similar work
 - Google Workspace being used only for Gmail/Calendar/Drive
-

Required Early Audit Questions

After collecting name, business name, and basic details, the audit must ask questions that uncover:

1. What type of business do you run?
2. What products or services do you provide?
3. Do you currently use Google Workspace?
4. What do you currently use Google Workspace for?
5. What software tools or platforms do you currently pay for outside of Google Workspace?
6. About how much do you pay monthly for those tools, if known?

7. How do leads or customers come in?
8. How do you track customers, jobs, projects, appointments, or orders?
9. How do you schedule work or appointments?
10. How do you communicate internally or with customers?
11. Where does repetitive manual work happen?
12. Where are you copying/pasting information between systems?
13. What reports or visibility do you wish you had?
14. Are there any tools you suspect you are underusing or overpaying for?

The AI should ask these conversationally, not as a rigid checklist.

Common Platform Replacement Awareness

The AI should be aware of common potential replacement patterns.

Examples:

Calendly may sometimes be replaced by:

- Google Calendar appointment schedules
- Google Forms intake
- Apps Script email confirmations
- Gmail templates

Trello, Asana, Monday.com, or ClickUp may sometimes be replaced by:

- Google Sheets project trackers
- Google Forms task intake
- Apps Script status updates
- Google Drive folders
- Google Calendar reminders

Airtable may sometimes be replaced by:

- Google Sheets databases
- filtered views
- protected ranges
- Apps Script automation
- Looker Studio dashboards

Typeform or Jotform may sometimes be replaced by:

- Google Forms
- Apps Script routing
- Google Sheets response tracking
- automatic confirmation emails

Slack may sometimes be replaced or reduced by:

- Google Chat
- Gmail groups
- Spaces
- Calendar workflows

Notion may sometimes be replaced by:

- Google Sites
- Google Docs
- Google Drive
- shared folders
- internal knowledge bases

Mailchimp may sometimes be reduced or replaced for lightweight use cases by:

- Gmail
- Google Sheets contact lists
- Apps Script mail merge
- scheduled follow-ups

Lightweight CRM tools may sometimes be replaced by:

- Google Sheets CRM
- Apps Script reminders
- Gmail templates
- Calendar follow-ups
- Looker Studio dashboards

The AI must not claim every tool can be replaced.

The AI must evaluate whether the customer uses advanced features that make the external platform worth keeping.

Keep / Replace / Consolidate / Automate Framework

For every major platform or process, the AI should classify it as one of:

Keep

The platform is business-critical, advanced, heavily used, or not worth replacing.

Replace

The platform appears to be used for lightweight functionality that can reasonably be recreated inside Google Workspace.

Consolidate

Some functions can move into Google Workspace, but the platform may remain for advanced features.

Automate

The platform may stay, but manual work around it can be automated.

Investigate

Not enough information exists yet to make a confident recommendation.

Software Inventory Data Model

The app should maintain a running software inventory during the audit.

Suggested structure:

```
{
  "softwareInventory": [
    {
      "name": "Calendly",
      "category": "Scheduling",
      "estimatedMonthlyCost": 12,
      "usedFor": "Client booking",
      "importance": "Medium",
      "replacementPotential": "High",
      "recommendedAction": "Replace",
      "googleWorkspaceAlternative": "Google Calendar appointment schedules +
      Google Forms + Apps Script confirmations",
      "notes": "Customer only uses basic booking functionality."
    }
  ]
}
```

This inventory becomes the foundation for:

- Platform Consolidation Snapshot
 - GSpace Consolidation Score
 - savings estimate
 - Recommendations Report
 - Implementation Guide + SOP Book
-

Audit Data Model

Suggested structured audit object:

```
{
  "user": {
    "name": "",
    "email": "",
    "businessName": "",
    "businessType": "",
    "businessSize": "",
    "currentGoogleWorkspaceUsage": "",
    "platformsUsed": []
  },
  "audit": {
    "answers": [],
    "softwareInventory": [],
    "workflowInventory": [],
    "bottlenecks": [],
    "manualTasks": [],
    "googleWorkspaceOpportunities": [],
    "automationOpportunities": [],
    "consolidationOpportunities": [],
    "risks": [],
    "recommendations": [],
    "gspaceConsolidationScore": 0,
    "estimatedMonthlySoftwareSpend": 0,
    "estimatedReplaceableMonthlySpend": 0,
    "estimatedAnnualSavings": 0
  },
  "payments": {
    "recommendations_report": {
      "status": "pending|verified|failed",
      "email": "",
      "verifiedAt": ""
    },
    "implementation_guide_sop": {
      "status": "pending|verified|failed",
      "email": "",
      "verifiedAt": ""
    },
    "done_with_you": {
      "status": "pending|verified|failed",
      "email": "",
      "verifiedAt": ""
    }
  }
}
```

```

    },
    "deliverables": {
      "platform_consolidation_snapshot": {
        "status": "not_started|generated|displayed",
        "pdfUrl": ""
      },
      "recommendations_report": {
        "status": "locked|generated|displayed",
        "pdfUrl": ""
      },
      "implementation_guide_sop": {
        "status": "locked|generated|displayed",
        "pdfUrl": ""
      }
    }
  }
}

```

GSpace Consolidation Score

Every completed audit should calculate a proprietary score:

GSpace Consolidation Score™

Purpose:

Estimate how much opportunity exists to consolidate software into Google Workspace.

Range:

0–25 = Minimal Opportunity
 26–50 = Moderate Opportunity
 51–75 = Strong Opportunity
 76–100 = High Opportunity

Factors:

- number of paid software platforms
- estimated monthly software spend
- duplicate functionality
- Google Workspace underutilization
- manual processes
- spreadsheet usage
- data duplication
- process fragmentation

- owner dependency
- reporting gaps

Example output:

GSpace Consolidation Score™
82 / 100

Potential Consolidation Opportunities: 6
Potential Automation Opportunities: 9
Estimated Replaceable Monthly Spend: \$127
Estimated Annual Savings: \$1,524

This score should appear in every report.

The score does not need to be mathematically perfect in MVP, but it should be consistent, explainable, and based on structured audit data.

Savings Estimate Logic

The app should estimate:

- current monthly software spend
- estimated replaceable monthly spend
- estimated annual savings
- number of possible tools to replace
- number of possible tools to consolidate
- number of possible automations

If the user does not know exact tool costs, the app may use conservative estimates.

The app should clearly label estimates as estimates.

The app should avoid exaggerated claims.

Use language like:

“Estimated potential savings”

“Potential replaceable spend”

“Based on the tools and usage described”

Do not guarantee savings.

PDF Deliverable Standards

All reports should be generated as branded PDFs.

Branding:

- Company: GSpace Solutions
- Product: GSpaceAi
- Style: clean, modern, consultant-like
- Tone: professional, practical, clear
- Use headings, tables, sections, and summaries
- Avoid walls of text
- Avoid generic filler
- Make each report feel custom to the business

PDFs should be downloadable and viewable from the app.

Free Report Structure

Report name:

Platform Consolidation Snapshot

Sections:

1. Cover Page
2. Business Snapshot
3. Current Software Inventory
4. Estimated Monthly Software Spend
5. Google Workspace Usage Summary
6. GSpace Consolidation Score
7. Potential Consolidation Opportunities
8. Potential Automation Opportunities
9. Estimated Savings Range
10. High-Level Findings
11. Recommended Next Step: Recommendations Report

Purpose:

This report should provide real value and create urgency.

It should show the customer where overlap may exist.

It should not reveal the full implementation roadmap.

It should not include detailed build instructions.

It should lead naturally into the \$29 Recommendations Report.

\$29 Recommendations Report Structure

Report name:

Recommendations Report

Sections:

1. Cover Page
2. Executive Summary
3. Business Snapshot
4. Software Stack Review
5. GSpace Consolidation Score
6. Platform Replacement Analysis
7. Keep / Replace / Consolidate / Automate Table
8. Google Workspace Consolidation Opportunities
9. Workflow Bottlenecks
10. Manual Work Reduction Opportunities
11. Recommended Lightweight Systems
12. Quick Wins
13. Medium Complexity Projects
14. Advanced Opportunities
15. Estimated Monthly Savings
16. Estimated Annual Savings
17. Priority Matrix
18. Recommended 30/60/90 Day Roadmap
19. Recommended Next Step: Implementation Guide + SOP Book

This report contains the full strategic roadmap.

\$79 Implementation Guide + SOP Book Structure

Report name:

Implementation Guide + SOP Book

Sections:

1. Cover Page
2. Implementation Overview

3. Recommended System Architecture
4. Required Google Workspace Components
5. Build Sequence
6. Step-by-Step Implementation Plan
7. Data Structure Recommendations
8. Automation Opportunities
9. Suggested Apps Script Functions
10. Gemini Usage Opportunities
11. Owner/Admin SOPs
12. Team/User SOPs
13. Maintenance SOPs
14. Testing Checklist
15. Launch Checklist
16. Recommended Next Step: Done-With-You Implementation

This report should be practical and implementation-oriented.

It should explain how to build or implement the recommended systems at a high enough level to be useful without pretending the customer has a full engineering team.

\$159 Done-With-You Implementation Confirmation

No PDF is required.

After verified payment, display:

Thank you for purchasing Done-With-You Implementation.

GSpace Solutions will review your audit results, recommendations, and implementation needs.

Next steps:

1. Check your email for follow-up from GSpace Solutions.
2. Keep your generated reports available.
3. Be ready to share access details or screenshots for the systems you want help implementing.
4. GSpace Solutions will coordinate the next implementation step with you.

Include configurable support contact:

support@gspacesolutions.org

Payment Gating Rules

The free Platform Consolidation Snapshot is generated without payment.

The Recommendations Report is locked behind \$29 payment verification.

The Implementation Guide + SOP Book is locked behind \$79 payment verification.

The Done-With-You confirmation is locked behind \$159 payment verification.

Payment verification must NEVER advance the customer to the next tier unless the purchased deliverable has been generated and displayed.

Correct flow:

Payment verified

- generate purchased deliverable
- save purchased deliverable
- display purchased deliverable
- only then show next offer

Incorrect flow:

Payment verified

- skip deliverable generation
- show next offer

This error must be prevented through explicit state management.

Error Handling Language

If payment is not verified, show:

Payment could not be verified yet. Please confirm the email used at checkout and try again. If you just paid, wait a moment and click verify again.

If the wrong product was purchased, show:

We found a payment for this email, but not for this specific report. Please confirm you selected the correct offer and try again.

If the email is missing, show:

Please enter the email address used at checkout so we can verify your payment.

Final Product Goal

The MVP should allow a real customer to:

1. Visit GSpaceAi.
2. Complete a conversational assessment.
3. Receive a free Platform Consolidation Snapshot PDF.
4. Understand potential software overlap and savings.
5. Pay \$29 for the Recommendations Report.
6. Verify payment.
7. Receive a paid Recommendations Report PDF.
8. Pay \$79 for the Implementation Guide + SOP Book.
9. Verify payment.
10. Receive the Implementation Guide + SOP Book PDF.
11. Pay \$159 for Done-With-You Implementation.
12. Verify payment.
13. Receive thank-you and next steps.

Build this as a real working app, not a demo-only mockup.

Supporting Context Files To Include

Include these files with the project if available:

1. Stripe payment links for \$29, \$79, and \$159.
2. Google Sheet column names from the payment tracker.
3. Apps Script web app URL used for payment verification.
4. Example row from the payment sheet using fake customer data.
5. Logo and brand colors.
6. REPORT_STYLE_NOTES.md.
7. GOOGLE_WORKSPACE_CAPABILITY_LIBRARY.md.
8. COMMON_PLATFORM_REPLACEMENTS.md.

If these are not available yet, create placeholders.
